# History

For over half a century natural beauty has been inspiring us to pursue the highest standards. Our products are created with exceptional care and full involvement of qualified staff.

We are a family company with a long history which since over 55 years cultivates the noble tradition in producing of wooden floors and combines them with modern trends in interior design.

Wooden floors DABEX are entirely natural product - the quintessence of latest technology and many years of experience. Our motto is: "Good floor is essential."

As it happens a beautiful wooden floor is a long-term investment and often for life. Therefore it should be carefully considered.

We ensure that our products have been an extremely reliable solution, which allows us to enjoy the appreciation of our clients

With us you can be sure that your interior will become modern, elegant and luxurious. To meet the expectations of even the most demanding customers we are constantly looking for the best solutions and expanding product range.

Wood – a true raw beauty, is a gift from nature, which we daily transform into the classic wood at its best. We provide the unique character of our floors, individual selection of finishing and attention to detail of the highest quality.

Dabex's Floors are the perfect choice combining nature with functionality.

Dabex is a precursor and guardian of tradition of hardwood flooring. At the same time stays a modern, trendy and thriving company open to adoption and application trends in the field of interior decoration. Such a fantastic blend of tradition with modernity allows us to implement various projects in the classic, entertainment, commercial and minimalist interiors giving them a unique atmosphere and style.

# Certificates

Allegiance to the rational forest management and care for the environment is one of the primary characteristics of our business. At the same time it is an irrefutable proof that we put great emphasis on responsible forest management. Harvesting and processing of the material in compliance with the EU regulations is very important for us. The confirmation of the delivery of the Good Forest Policy and high quality of our products are prestigious certificates.

# Ecology and environment

Our primary aim is respect for the environment. Largely harmonious coexistence with the natural environment is important to us and that is why we are open to issues of ecology and care for nature.

We use 100% wood harvested only from inspected and certified forests, including forests under the FSC. This means that the raw material from which we produce our high quality flooring comes from forests which meet the Forest Stewardship Policy. These rules are set by members of the FSC, which like the company Dabex directs the good of the environment and the good living and functioning in the community. Many years ago we consciously made a choice and we focused on nature-friendly products (100% wood), because we thought they would be the ideal products to the public interest in the issue of ecology. The consequence of this decision is the creation of a rich product range both in terms of wood flooring, and briquettes, firewood.

Besides the fact that our floors we produce from natural raw material constituting a renewable resource, additionally they are finished with natural oils and high-quality varnish free from harmful chemicals.

Production waste as sawdust are used to production of eco friendly and high-energy briquettes, which can be used in households instead of coal or fuel oil, thus we contribute to reducing CO<sub>2</sub> emissions.

It is important in our business to involve in the establishment and functioning of national recovery and recycling of packaging waste. According to the license agreement on the above issues Dabex has the right to use the trade mark "The Green Dot". Packaging of our products are ecological and fully subject recycled.

Our company is aware of how important are issues of ecology social responsibility of the manufacturer.

## Social activity

We are convinced that the implementation of our business objectives is not limited to a narrow, specialized fields which are production, trade and services related with the offering and the promotion of wooden floors.

We also conduct activities in a specific social context. Otherwise, that we are lovers of nature, nature and ecology, we love people for whom we are creating beautiful floors with the passion, but also support their cognitive activities and pro-social initiatives.

The success of our company depends certainly on values such as thrift, respect for work and innovation, which have always been inscribed in the history of our company. However, this undoubted success mainly depends also on the local community, where participants can get in touch with us, giving a positive effect cooperation. That is why we want to be present in the life of the local community and interact with it by supporting a number of wise social and civic initiatives.

Guided in their actions by the idea of social responsibility we support selected local initiatives and projects.

Therefore, we try to actively participate in the life of Grodzisk Wielkopolski The city, where are located Dabex headquarters - supporting major sporting event : "Slovak Half Marathon". This event has enjoyed great success and is very popular among amateur runners. We are try to motivate women to fight for top spot on the podium by our presence in the half-marathon.

This year we also have the honor of another local initiative. We support young people from Globbus Team, which in a highly creative way has decided to realize an expedition with iconic Volkswagen T3 route covering fifteen countries in Western Europe. As a producer of natural wooden floors we assign special importance to initiatives that promote the idea of the safety and health of children.

Regarding to this we cooperate with the Gwiazdka Foundation becoming a supplier of wooden floors to the rooms which meet the children's (day rooms) and sick needs (rehabilitation room).

We are pleased to also get involved in the events organized for the youngest, hence the idea to take care of the Dabex Family Sector on INEA Stadium in Poznań.

Together with the management and the players of KKS Lech we provide children and their parents an unforgettable impression of the matches and the feeling fantastic and safe play.

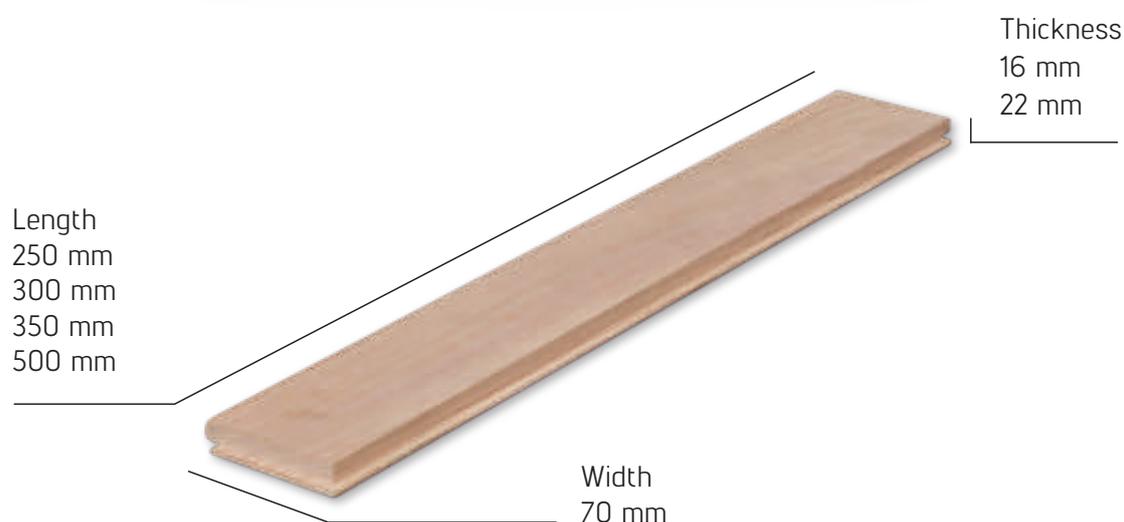

# Products

## Solid Parquets

Oak natur, 16 x 70 x 500 mm

## Solid parquets

Unfinished parquet floors and unfinished boards let us recall the romantic memory of ancient times, which characterized classic laying. Such products are perfect for customer who is seeking the floor which can install in checked elegant patterns. Solid parquet range is profiled from solid planks and is available in two versions: parquets with thickness of 16mm and parquets with a thickness of 22mm. These products after sticking to the ground require varnishing or oiling.

This enables individual choice of color finishes dedicated to a specific interior. Despite the traditional design parquet and solid boards are made using modern technology. Unfinished solid parquets and boards are high-quality products which are perfect match for private investors houses as well as in public spaces like sports hall.

Dabex solid products are characterized by thermal and acoustic insulation, and an additional advantage is the possibility of their repeated renewal over the decades, which directly leads to the finding of the fact that these are long-lived floor.

## Finished solid parquets

Ash selekt, varnished, 16 x 70 x 490 mm

## Finished solid parquet

Parquets made of solid wood generally can be divided into unfinished and finished solid parquets. The company Dabex following the current trends, has introduced to its offer finished solid parquets, which can be manufactured varnished or oiled. The essence of their existence is that they do not require an additional varnishing or oiling, which significantly reduces installation time. On the other hand choosing bevel on all edges of each element gives the floor a fashionable look. The end result is that finished solid floors are the quintessence of nature, beauty and modern technology.

Dabex finished solid parquet is an exceptionally noble and exclusive line of flooring, which also have high thermal insulating properties. Moreover, after many years of use we can renew , change their colors and thus adapt to the interior design or our liking. Due to the development of innovative solutions in room settings, we want to offer our customer finished solid floors were not only aesthetic and durable, but also corresponded to the trends and needs of customers.

## Varnished floor care

Among the factors contributing to delay the effects of the using of varnished hardwood flooring the most important are the principles proper use of the floor and the frequency and the process of care. In order to keep the floor painted as long as possible in perfect condition it is recommended:

- Maintenance of initial consisting of washing the floor intensive cleaner to remove any dirt and applying appropriate means of care mounted on the floor, mainly to protect the floor, painted against light damage and the closure invisible to the naked eye microcracks between the different parts of the floor, created after the installation of parquet or boards,

- Thorough maintenance (renovation of floors), the essence of which is to remove the coating nursing, usually its sanding and applying a new coat of paint and protect it in accordance with the principles of conservation of the initial,

- The actual floor care, which involves the systematic removal of floor dust and sand. Maintaining the current purity is the removal of contaminants by sweeping, vacuuming and wiping the floor with a damp cloth. Not recommended contrast, the to wipe the floor wet mops. Depending on the degree of exploitation lacquered floor, you should wash it if necessary intensive cleaner and apply sealer finished floors.

Keep in mind that even the hardest coating of lacquer has its own life and not being able to protect the floor from intensive use. It is necessary to systematic use of care, which not only refreshes the floor, but also create a protective coating.

# Maintenance products

Many decades of dynamic growth resulted creation of high quality products of DABEX and obligate us to give the best systems for installation, care and maintenance our wooden floors.

In this connection we create comprehensive range of professional maintenance products for our parquets, boards and mosaics. We ensure that offered products from our range of maintenance products will gain your confidence and will make your work with Dabex brand (DBX) easier and more effective.

Using our system of maintenance products for raw, varnished or oiled ensure their durability and reliability and beautiful look for many years.

# Care oiled floor

Wood parquets and oiled boards give the rooms a special and natural climate.

To long to enjoy the beauty of an oiled floor, it should be from the very beginning properly and also systematically nurtured. The floor because of the passage of time less becomes susceptible to wear, because treatments increase its resistance to dirt, provide extra protection and definitely extend its life.

Manufactured pre-oiled the floor after installation and vacuuming must be washed thoroughly the intense remover, then apply a coat of nursing preservative oil to protect an oiled floor and the closure invisible to the naked eye microcracks created after the installation of parquet or boards between the individual elements of the floor.

Daily care for oiled floors involves vacuuming or sweeping them and, if necessary, soap wet washing for oiled floors. Soap not only washes but also generates on the floor renewable protective layer, which protects the wooden floor against dirt. If the oiled floor is stained badly it should be thoroughly washed with an intensive cleaner, then additionally with soap for oiled floors, which restore a protective layer.

In the case of an oiled floor we have the ability to remove spot / partly persistent stains or dirt. They are removed intense cleaner or spot remover and then applied maintenance oil. However, if the stain is too difficult to remove, the affected area should sandpaper and re-oiled using oil for unfinished floors. Finally floor should be polish dry until a homogeneous coating.

**Important!** Do not leave oil on the floor in the form of a diffuse/bloated layer

# Underfloor heating

For centuries wood is the most popular and most used finishing material, which giving a sense of beauty and durability. Most importantly, the fashion for wood does not go away, despite changing trends in interior design.

The choice of hardwood flooring on floor heating is one of the elements of the whole process underfloor heating in the room. To achieve the required effect should be noted, not only on the type of wood and thickness of the wood, but also on surface preparation, selection of materials for laying floors and the proper operation. Installation of flooring with underfloor heating requires from flooring contractor vast experience, strict adherence to technology and knowledge about changes in the properties of the materials used.

Dabex has in its extensive portfolio 2-layer wooden parquets, 2-layer wooden boards Maxi and Mega Profi which provides an excellent solution for use on underfloor heating. We offer a wide range of floor designs that through proper layer construction and low values of thermal resistance, perfectly suited for floor heating systems.
